CNA primary care nurse statement

A "CNA policy statement on the primary care nurse" issued by the Canadian Nurses' Association states:

> CNA believes that accessibility to and effectiveness of Canadian health services can be increased through expansion of the roles of nurses. For example, nurses should have an enlarged role in primary health care.
>
> Three areas in which immediate action could be taken to utilize nurses more effectively are: 1) primary care for ambulatory patients; 2) continuing care for convalescent and long-term patients; 3) preventive care toward conservation of health.
>
> CNA believes that preparation for primary care nursing should be part of basic nursing education.
>
> CNA believes that until preparation for primary care is included in basic nursing education, both long- and short-term courses should be available to prepare nurses to function in primary care settings. Where possible, these courses shall be developed and implemented in university health science centers. The administrative authority shall rest with the faculties of nursing.
>
> CNA believes that remuneration for the primary care nurse should be on a salary basis. This salary shall be adequate, competitive, and include recognition of responsibility, experience, educational qualification, seniority, as well as income security benefits, such as sick leave and pensions.
